

ZEROSION

*Because every 20-minute job is a corroded nut
away from a 2-week ordeal.*

Zerosion anti-corrosion system is a hand applied elastomeric resin coating, specifically designed to protect your fixed assets from environmental or chemical instigated galvanic corrosion.

Zerosion revolutionizes the mechanical engineering game, by removing the requirement for SA/ISO blasted surfaces, and implementing a versatile barrier to extend the life of vulnerable components (flanges, valves, nuts and bolts) and, that can easily be removed when access is required.

Moreover, projects that we started in the UK 10 years ago are seeing cost saving and asset life extension of over 1000% in H2S environments.

We are now based in Houston, serving the US as our primary operation. US made, US applied

All sound too good to be true? come visit us at stand 5 at the Coating Society of the Houston Area Annual Tradeshow and ask us.
